PUBLIC SECTOR

citrix

Building a secure, connected infrastructure

Challenges in the public sector — like compliance and regulatory standards, managing different identities, data migration and network disruptions — can be complex and time-consuming, making it difficult to maintain productivity and ensure data security. These challenges demand a hosting environment and cloud platform that offer versatile capabilities, data protection and seamless management of applications and desktops across endpoints, regardless of location.

With the complexity of cloud migration and management, you need an IT ecosystem that simplifies migration, keeps up security and productivity standards and streamlines maintenance — all while maintaining end-user productivity and ensuring security.

Common IT challenges for the public sector

Compliance:

Agencies, organizations and institutions within the public sector must meet compliance and regulatory standards to ensure data privacy and protection.

Managing different identities:

Cloud-based applications and services each come with their own identity, making management across different providers a challenge.

Migrating data:

Migrating data and apps from legacy systems to cloud-native platforms can be a long and complex process.

Network disruption:

With a greater distance between end users and the network applications they need, difficulties with application and virtual desktop delivery can be difficult.

Overcoming hurdles with Citrix

Whether you need to meet compliance standards, securely migrate data to the cloud or ensure secure, instant delivery of apps and desktops, Citrix provides intelligent, simplified cloud migration and management services.

Citrix® solutions, delivered by Insight Public Sector, put efficiency and scale at the forefront. We provide end users with a better experience and help you prepare for the future. Designed with your organization in mind, Citrix cloud migration services — including virtual app and desktop delivery — ensure performance, security and end-user productivity.

With Citrix, you can spend less time worrying about data security and IT infrastructure, and more time focusing on what matters to you.

Unified. Simplified. Secure.

Boost employee productivity anywhere.

- Enable secure remote work
- Deliver industry leading Cirtual Desktop Infrastructure (VDI).
- Provide an HD user experience.
- Prevent business disruptions.

Secure your endpoints regardless of location.

- Enable secure work from anywhere with Zero Trust network access.
- Upgrade your security posture with secure private access.

Empower a secure, consistent user experience everywhere.

- Secure Bring Your Own Devices (BYOD) .
- Modernize your IT security.
- Onboard remote employees quickly.
- Simplify SSO.
- Get a VPN alternative.

Accelerate and streamline IT modernization and management.

- Deploy Device as a Service (SaaS).
- Modernize your datacenter.
- Save time and money with DaaS.
- Migrate to the cloud.

Serving the public sector anywhere, anytime

Florida Department of Health case study

The Florida Department of Health (FDOH) encountered difficulties in granting over 400 of its locations access to crucial applications and resources. These provisions are necessary in order to safeguard, promote, and enhance health outcomes across the state. The department needed a solution to ensure efficient operations during disasters and extreme situations, such as hurricanes that could damage or destroy its buildings.

As a solution, the FDOH created and deployed the Model Office concept. By migrating infrastructure to the cloud, the model allowed the team to modernize and streamline IT service delivery across dispersed sites. This ensured consistent, reliable access to all resources, from any device. Plus, they added built-in disaster recovery and security.

The FDOH rolled out the Model Office with Amazon Web Services (AWS), Citrix, Microsoft and Northwest Regional Data Center. They used Citrix Workspace to manage their multicloud, multi-device environment for over 26,000 endpoints. Citrix Workspace cloud provides the FDOH team access to virtual apps and desktops from any location.

Partnering with Citrix meant the FDOH delivered on its commitment to provide quality services to its citizens, even in the worst of circumstances.

//

As we considered modernization options, the top priority was business agility. Whether during disasters or during everyday operations, we need to provide FDOH business users with access to applications and data anywhere, any time, and from any device — securely.

//
