Managed Network Configuration Backup

Business challenge

In today's complex network environment, safeguarding your configurations is not just an option—it's a necessity.

When companies lack a proper network configuration backup solution, they encounter several critical challenges that impact their overall business operations or efficiency, network operations, disaster recovery and security. Additional challenges include:

- Lengthy and laborious recovery procedures

- Failure to troubleshoot and identify the root cause of network outages

- Vulnerability to security threats due to inconsistent config backups

- Overburdened IT teams and unrealistic timelines

How we help

We remove the stress of a lengthy recovery processes and empower your IT team with the tools they need to meet and exceed demanding timelines. With consistent configuration backups, we cover your network and bring you peace of mind.

Insight's Managed Network Configuration Backup is a solution designed to provide secure configuration management for network devices such as routers, switches, proxies, load balancers and firewalls. The solution integrates the Restorepoint tool to ensure successful network backups, risk mitigation, enhanced security and operational continuity.

Benefits include:

- Automated config backups

- Configuration management

- Real time change detection

- Inventory and audit reporting

- Rollback, recovery and restoration

Benefits

- Reduce costly outages

- Disaster recovery restoration efforts

- Operational and business continuity

- Reduce downtime

- Cyber resilience

- Compliance and audit

- Efficiency, productivity and automation

Driving your network transformation

One of the most harrowing aspects of disjointed networks is dealing with the barrage of data being generated. Which data is relevant? What should be done with it?

Additionally, which technologies are worth the investment, and which simply aren't?

Software-defined	Endpoint protection	Behavioral systems	Network visibility	Network access
SDN, SD-WAN, SDA, and application infrastructure builds and support	Security to ward off malware, ransomware, DNS attacks, and emerging threats	Analytics, reputation, and containment for machine learning, AI, SIEM, and NGFW	Management and monitoring using segmentation, authentication, and advanced controls	LAN, WAN, wireless, and VPN traffic control and load balancing

Managed Services Suite

While network configuration backups are critical, managed services encompasses a wide range of interconnected practices. Insight can assist with a holistic set of services that are robust and ensure efficient and secure operations that are backed by industry leading SLA's.

Digital Workspace Services	Managed Workplace Services	Managed Infrastructure	X as a Service
Modern end-user solutions	End-user support solutions	Complete solutions for data center and network infrastructure	Flexible consumption-based IT solutions

Managed Security	Managed Cloud	OneCall Support
Endpoint to data center	Public cloud IaaS and cloud-native	OEM Support Services
