TREND MICRO™

ENDPOINT SUITES

Complete security and simple packages from your proven security partner

Get smarter security that goes where your users go

The threat landscape is constantly changing and traditional security solutions can't keep up. Moving to multiple point products on a single endpoint results in too many products that don't work together, increases complexity, and leaves gaps in your security. To further complicate matters, with increasing remote workers, you need access to cloud solutions to improve agility.

There is no magic solution that stops all of today's evolving threats. You need smart security that uses the right technique for each type of threat without slowing you down. Security that is connected by using multiple layers to stop emerging threats and attackers faster. Security that is optimized to work in your environment from a forward-thinking, proven vendor that is always working on the next generation of security. It's time to think seriously about Trend Micro Endpoint Suites.
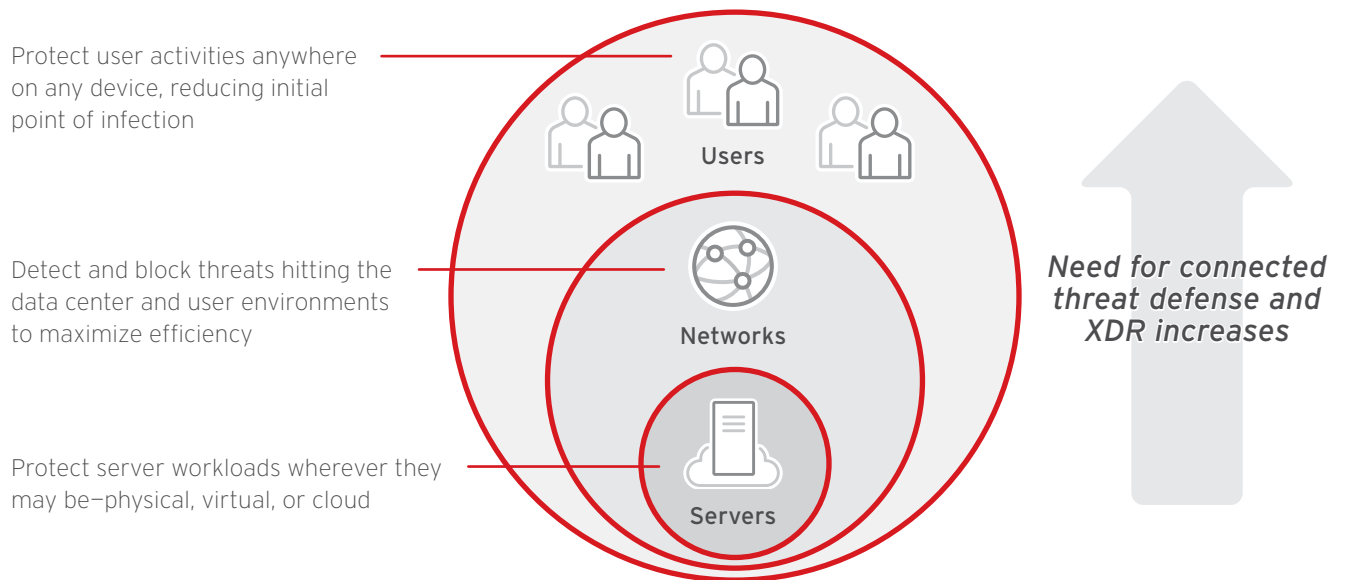

Trend Micro Endpoint Suites: Automated, Insightful, Connected

AUTOMATED: Effectively protect, detect, and respond to zero-day threats. Endpoint Suites uses a blend of next-generation anti-malware techniques and the industry's most timely virtual patching to stop attackers quickly.

INSIGHTFUL: Get exceptional visibility across your environment with central visibility and control across protection points. Access to Trend Micro Vision One™ provides extended detection and response (XDR) for extensive investigation and threat hunting.

CONNECTED: Quickly respond to attacks with real time and local threat intelligence updates along with a broad API set for integration with third-party security tools. Flexible deployment options fit perfectly with your environment.

Risk Management Requires Layered Protection

Protect user activities anywhere on any device, reducing initial point of infection

Users

Detect and block threats hitting the data center and user environments to maximize efficiency

Networks

Protect server workloads wherever they may be—physical, virtual, or cloud

Servers

Need for connected threat defense and XDR increases

Eliminate Security Gaps with Superior Protection

Endpoint Suites protect all user activities, reducing the risk of sensitive information loss.
Leverage advanced protection with **endpoint, email and collaboration, web, and mobile security**.
The result is a protective shield that is extremely difficult for cybercriminals to penetrate.

## Automated: The Right Technique at the Right Time (XGen™ security)
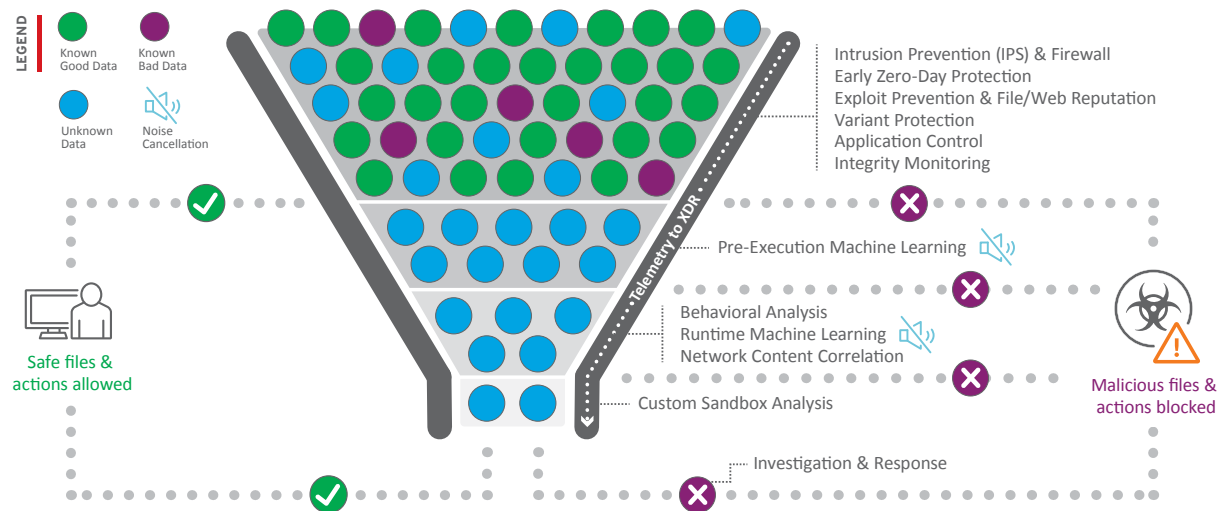

- **Maximum protection**. XGen™ security goes beyond next-generation security to synthesize high-fidelity machine learning with a blend of threat techniques.

- **High-fidelity machine learning**. Used on pre-execution and runtime analysis for more accurate detection. Noise cancellation techniques like census and safelist checking at each layer to reduce false positives.

- **The broadest threat protection**. Includes a full range of integrated defense across gateways, endpoints, mobile devices, servers, and security as a service apps. Throughout the entire network, you receive multiple layers of anti-threat capabilities to protect against even the newest and most sophisticated threats.

- **Detection and response**. Trend Micro Apex One™ includes automated detection and response capabilities within a single agent, such as behavioral monitoring and ransomware rollback. Endpoint telemetry is sent to Trend Micro Vision One to provide XDR capabilities, including extended detection, automatic sweeping via Trend Micro threat intelligence, and intuitive investigation to see more attacks and respond faster.

- **Interconnected security**. Automatically share local threat intelligence between endpoint and gateway security layers to protect against emerging attacks.

- **Better protection of your information**. Integrated data loss prevention (DLP) protects your information. Application and port control prevent users from sending information where it doesn't belong.

- **Comprehensive view of user security**. You can manage all layers of security from a single console for comprehensive analysis of data and threats throughout your environment.

- **Real-time, connected threat intelligence**. Take your protection to the next level with insight from Trend Micro's threat defense experts and real-time updates from our global threat intelligence network.

Protect users without impacting user experience

With Endpoint Suites, you can count on stronger security that's lightweight so it won't impact the user experience. It also supports all of the devices and applications that your users want to use. Global threat intelligence from Trend Micro™ Smart Protection Network™ rapidly and accurately identifies new threats across all layers of security with real-time threat updates.

INSIGHTFUL: TREND MICRO VISION ONE THREAT DEFENSE PLATFORM

Depending on the suite, Endpoint Suites include either partial or full access to the Trend Micro Vision One threat defense platform for powerful XDR and threat intelligence capabilities. Trend Micro Vision One collects and automatically correlates data across multiple security layers, such as email, endpoints, servers, cloud workloads, and networks. Using advanced security analytics, it detects and tracks attackers across these layers, allowing security teams to quickly visualize the story of an attack and respond more quickly and confidently.

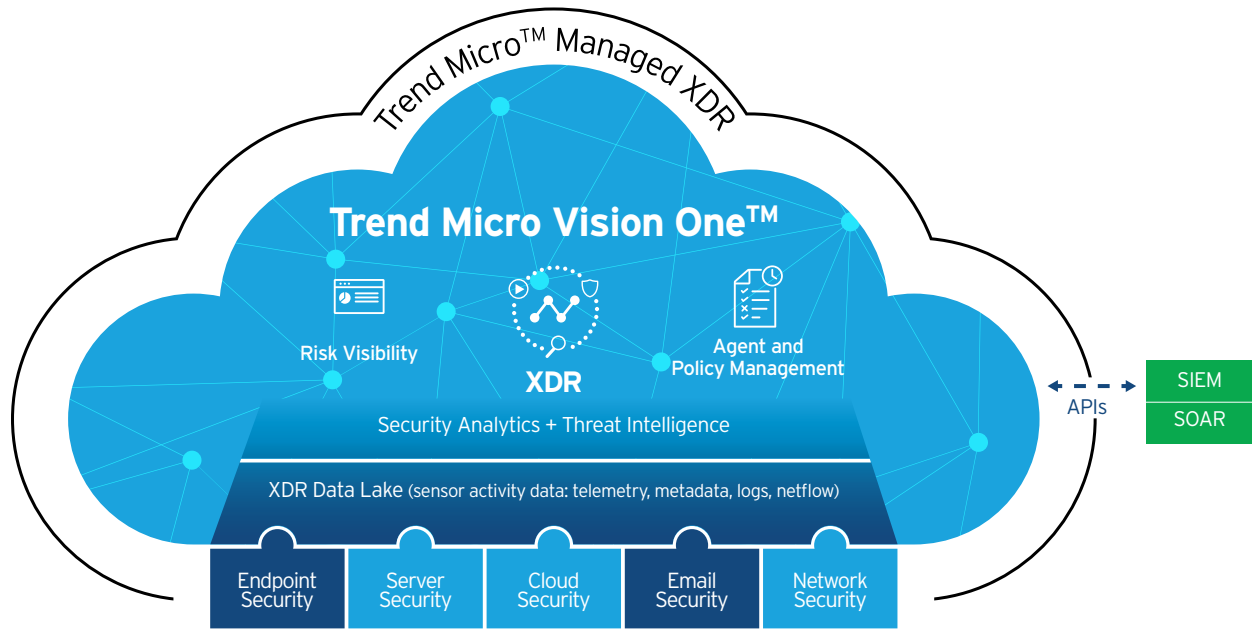

Trend Micro Vision One: One place for attack discovery, investigation, and response

TREND MICRO™ MANAGED XDR

Managed XDR is an optional service that augments your security team with threat hunting and investigations by Trend Micro threat experts. It provides 24/7 alert monitoring, alert prioritization, investigation, and threat hunting services to Trend Micro customers. Depending on the Trend Micro solutions in the environment, the Managed XDR service can synthesize data across email, endpoints, servers, cloud workloads, and networks to detect attackers, determine the full root cause, and provide an incident report and remediation plan.

Bolster Security and Accomplish More with Central Visibility and Management

Multiple layers of connected Trend Micro security solutions are managed from a single console. You get one view of all threat information for comprehensive visibility of user security in a timely and efficient manner. You'll be able to dive deeper with user-centric management, allowing you to easily understand how threats are spreading for a particular user across multiple systems, over time. Plus, it's fast and easy to deploy, configure, and manage.
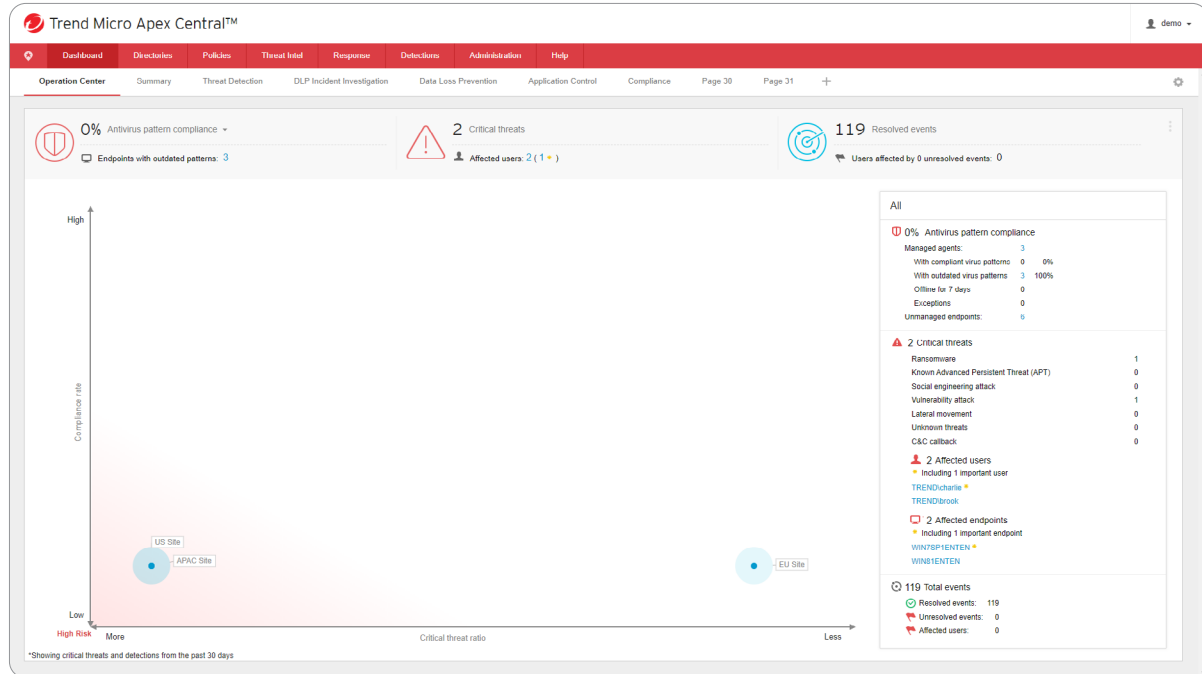

Trend Micro Apex Central™: View security events by user across all their devices

Trend Micro has been positioned as a Leader in the Forrester Wave for Endpoint Security Suites 2019, Enterprise Email Security 2019, and Enterprise Detection and Response 2020.

Trend Micro positioned as a Leader and has been named a Leader since 2002 **2019 Gartner Magic Quadrant for Endpoint Protection Platforms**.

Trend Micro User Protection solution is powered by XGen™ security, an automated, insightful, and connected security approach.

Save Time and Money with Cloud Solutions

With cloud-powered solutions for email, endpoint, and web security, you reduce the workload for IT and security teams. There is no internal infrastructure to maintain, which not only saves time, but more importantly provides you with the latest patches and protection. Trend Micro Apex One™ as a Service delivers 99.9% availability and Trend Micro's operations team can even proactively fix minor issues on your behalf. Plus, if you're not quite ready for the cloud, we offer on-premise solutions via Trend Micro™ Smart Protection™ Suites.
